for Sustainable
Solutions*

From Research to Practice—

**Consulting and
knowledge transfer**

Politics, administration, business, and society face many challenges. This is what drives us to provide interdisciplinary, practical advice based on over 35 years of research experience.

Through our transfer activities we address the specific knowledge needs of our target groups. In so doing, we aim to promote joint learning processes towards sustainability. We develop creative formats and build on proven approaches, such as our offerings within the framework of the Frankfurt Citizens' University.

Institute for
Social-Ecological
Research

About us

For People, Society, Nature—

The Institute for Social-Ecological Research (ISOE) is one of the leading institutes for sustainability research. We do the scientific groundwork and then develop forward-looking concepts for social-ecological transformations.

Together with our partners in science and society, we create space for a shift towards sustainability.

*ISOE—
in Frankfurt
since 1989*

Our research

What impact is climate change having on our water resources? How can mobility be made future-proof? What do local authorities need for successful climate adaptation? How can we protect biodiversity more effectively? How do we deal with chemical risks?

These and other questions are the focus of our research. We also work on topics such as land use, sufficiency, knowledge, and participation.

Through our transdisciplinary research, we show how such issues and challenges can be addressed in a sustainable and equitable manner and how conflicts can be resolved constructively.

Shaping Transformation Together—

*Shaping
Sustainability—
through Dialogue*

Passing on Knowledge—

Our network

Real-life partners play a crucial role in social-ecological research. In our work, we therefore rely on close cooperation with local authorities and other stakeholders. We also have long-standing partnerships with the Senckenberg Society for Nature Research and Goethe University Frankfurt.

University teaching and training of young scientists

Through our research-based teaching and support for young scientists, we want to inspire young people to engage in sustainability research and encourage them to help shape change.
